                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A;Contents: annotation; disulfide bonds
C;Comment: The sequence shown is the C3 fast (C3F) allele, which is found mainly in Cauc
C;Comment: Complement C3 contains two chains, formed by removal of four residues and lin
alternative complement pathways, releases the C3a anaphylatoxin from the amino end of t
rnative-complement-pathway C3/C5 convertase.
C;Comment: C3a anaphylatoxin is a vasoactive peptide and a mediator of inflammation.
C;Comment: C3b, with its highly reactive thiol group, binds to the surface of foreign pa
e classical-complement-pathway C3/C5 convertase. The activity of C3b is regulated by pro
C;Comment: The major site of synthesis of this plasma protein is the liver.

A;Cross-references: GB:M32434; NID:gl64862; PIDN:AAA31190.1; PID:gl64863 C;Comment: Complement C3 contains two chains, formed by removal of four residues and lin alternative complement pathways, releases the C3a anaphylatoxin from the amino end of tirrative-complement-pathway C3/C5 convertage.

C;Comment: C3a anaphylatoxin is a vasoactive peptide and a mediator of inflammation. C;Comment: C3b, with its highly reactive thiol group, binds to the surface of foreign paed classical-complement-pathway C3/C5 convertage. The activity of C3b is regulated by procycomment: The major site of synthesis of this plasma protein is the liver.

C;Superfamily: alpha-2-macroglobulin
